find favour with Chandigarh Housing Board (CHB).

The CHB, keeping in tune with growing global concern for the environment, has planned to go green and construct 'eco-friendly' buildings almost a year back.

The concept of environment-friendly buildings is gradually catching up in tricity. With effects of climate change across the world, governments and individuals are starting to take the task of building eco-friendly houses much more seriously. Stimulated by growing demand, a new industry of eco-friendly home building has grown and a multitude of technological innovations have occurred.

In recent times, the concept of green homes is steadily increasing its footprint in Chandigarh and its neighbouring towns.

The home buyers are today looking for a place which is sustainable, environmental friendly and at the same time luxurious. He does not want to compromise on either comfortable living or sustainability.

Sensing the need of eco-friendly buildings, reputed companies operating in the real estate business are coming up with projects involving environment-friendly buildings. The salient features of these eco-friendly housing projects are aesthetically laid out parks, segregated children's play area, jogging track, earthquake resistant RCC structures, school and

health care in the vicinity, connected with airport road, daily needs available next door, plush well-planned interior and stilt parking.

The eco-friendly apartments are faultlessly nature friendly luxurious homes. They ensure that your need for comfort and sustenance are met, without compromising on anything.

"The eco-homes offers an environment that we yearn to give our future generations - life close to nature and with all the amenities available in a modern city life," opines Sanyam Dudeja, COO, Taneja Developers & Infrastructures Ltd, which is developing Wellington Height, that boasts of eco-friendly luxurious apartments in the region.

Interestingly, the concept of 'eco-friendly' buildings has also
